

I believe that this motion will hurt, nay, destroy many independant ISP's. As a libertarian, in general I believe that regulation is not favorable to business. However, in the case of an industry that has a virtual monopoly on a certain infrastructure, I believe it is important that their actions are regulated to enable smaller firms to compete. I believe that it forces the larger companies to improve their service level to ensure they do not loose customers en-masse.

Please do not stop regulating the Bell's. Thank you.
